

## APNA GHAR

### An initiative to build home for tribal community

**Introduction:-** The word “tribal” or Adivasi brings to our mind a picture of half-naked men and women, with arrows and spears in their hands, feathers in their heads, and speaking an unintelligible language. Even when majority of the communities in the world kept changing their life-styles very quickly to keep pace with the “progress” of the world, there were communities still living in line with their traditional values, customs and beliefs, where they could continue to live in peace with Nature and their unpolluted environment. The mainstream world, so called civilized people branded these communities variously as natives, uncivilized people, Aborigines, Adivasis, Tribals, Indigenous and uncontacted people etc. In India, we mostly refer them as Adivasis/Girijans. Tribal communities are facing number of problems they are educationally backward, deals with many social & religious issues and faces poverty, exploitation, forced displacement, various health problems and many more. Like other societies, tribal society is also not static, rather is quite dynamic. The transformation among tribal society is very slow. That is why they have been backward and poor in comparison to other communities. Since they have been materially backward and economically poor, attempts have been made by the Government to develop them. Today, the governments of all over the world are paying special attention towards the development of the tribal.

**Defining A Tribe:-** The term, “tribe” originated around the time of the Greek city-states and the early formation of the Roman Empire. The Latin term, “tribus” has since been transformed to mean, “A group of persons forming a community and claiming descent from a common ancestor”. The Imperial Gazetteer of India, 1911, defines a tribe as a “collection of families bearing a common name, speaking a common dialect, occupying or professing to occupy a common territory and is not usually endogamous though originally it might have been so”. Another definition of a tribe by D.N. Majumdar (1961, 367) is that “a tribe is a collection of families or group of families bearing a common name, members of which occupy the same territory, speak the same language and observe certain taboos regarding marriage, profession or occupation and have developed a well-assessed system of reciprocity and mutuality of obligations”. In Indian context the term tribe has never been defined satisfactorily. Tribals in India were considered to be as “backward class” and until 1919 they were termed as “depressed class”. The census of India accorded the different nomenclature for tribals, in 1931 census referred them as “primitive tribes”, 1941 census as “tribes” and 1951 census as “scheduled tribes”. The Constitution of India refers to such communities as „Scheduled Tribes“. In Hindi, the synonyms used for „Scheduled Tribes“ is „AnusuchitJanjati“ and other words like Adivasi, Vanavasi or Adimjati are used as synonyms of tribal. Article 366 (25) defined scheduled tribes as "such tribes or tribal communities or parts of or groups within such tribes or tribal communities as are deemed under Article 342 to be Scheduled Tribes for the purposes of this constitution". Article 342 prescribes procedure to be followed in the matter of specification of scheduled tribes. The criterion followed for specification of a community, as scheduled tribes are indications of primitive traits, distinctive culture, geographical isolation, shyness of contact with the community at large, and backwardness. This criterion is not spelt out in the Constitution but has become well established.

**Tribes of India:-** India is characterized by having second largest tribal population in the world after Africa and it is interesting to note that there are around seven hundred tribes inhabited all over India. According the 2011 census, tribals constitute 8.61% of the total population of the country. The largest concentrations of indigenous peoples are found in the seven states of north-east India, and the so-called “central tribal belt” stretching from Rajasthan to West Bengal. More than half the Scheduled

Tribes population is concentrated in the States of Madhya Pradesh, Chhattisgarh, Maharashtra, Odisha, Jharkhand and Gujarat. There are over 700 Scheduled Tribes notified under Article 342 of the Constitution of India, spread over different States and Union Territories of the country. Many tribes are present in more than one state. The largest numbers of scheduled tribes are in the states of Orissa (i.e. 62). Some of the major tribal groups in India include Gonds, Santhals, Khasis, Angamis, Bhils, Bhutias and Great Andamanese. All these tribal people have their own culture, tradition, language and lifestyle. There are many more such tribes in the country, who are living away from the mainstream of the country. There are, however, many more ethnic groups that would qualify for Scheduled Tribe status but which are not officially recognized.

**Distribution of Tribes in India:-** The Scheduled Tribes are notified in 31 States/UTs. The tribal population of the country, as per 2011 census, is 10.43 crore, constituting 8.61% of the total population. 89.97% of them live in rural areas and 10.03% in urban areas. The decadal population growth of the tribal's from Census 2001 to 2011 has been 23.66% against the 17.69% of the entire population.

Meghalaya, Mizoram and Nagaland are the 3 states of India where 100 % of tribal population living in tribal areas. We have 32% tribal area in India. The sex ratio for the overall population of India is 940 females per 1000 males and that of Scheduled Tribes 990 females per thousand males. At the district level, 2011 Census reveals that there are 90 districts where ST population is 50 per cent or more. As per Census 2001, this number was 75 districts. Out of these 90 districts, 48 districts are in 8 North Eastern States. All the districts in Mizoram, Meghalaya and Nagaland have more than 60% of ST Population. Madhya Pradesh has the largest number of ST's contributing 14.69% to the total percentage of ST population of India. Among States Mizoram (94.43) has highest proportion of STs and Uttar Pradesh the lowest (0.57). Among UTs, Lakshadweep with 94.8 percent of ST Population ranks first and Daman & Diu has the lowest proportion of STs (6.32). With respect to districts, KurungKumey district of Arunachal Pradesh has the highest proportion of Scheduled Tribes (98.58) and Kannauj in Uttar Pradesh has the lowest proportion of Scheduled Tribes (0.0009). No community has been specified as Scheduled Tribe in relation to the State of Haryana and Punjab and Union Territories of Chandigarh, Delhi and Pondicherry.

**Livelihood of tribal people:-** The traditional livelihood system of tribal people (also known as adivasis) has been based on shifting cultivation and collection of edible forest produce. Such a system was rendered sustainable by a level and pattern of utilisation of land and forest resources, which ensured their self-generating capacity. Sustainability was also ensured through adoption of a highly diversified pattern of production and shifting cultivation. When shifting cultivation began to decline from about the second decade of the 20th century, and tribal people took to settled agriculture mainly on the uplands, they actively adapted to upland conditions by growing a large variety of crops. While the physical yield of these crops was quite low in comparison with that of modern mono-crop agricultural practices, it minimised the risk of complete crop failure. Such a livelihood system also provided for a nutritionally balanced food consumption basket. All in all, one may say that tribal people were perhaps the earliest 'social ecologists': tribal people's economic conditions of existence were rooted in both subsistence and conservation ethics. In social terms, the traditional livelihood system was based on customary, usufructuary rights of tribal communities over land and forests. It was also an 'extensive' system of production. The 'common pool' nature of resources supported customary rights and prevented the intensification of production, in the interest of conserving and sustaining the long-term productivity of livelihood resources. The sustainability of tribal people's livelihoods was thus firmly rooted in a system of 'property' rights over land and forests. As a consequence, the livelihood system's 'carrying capacity' was relatively low and it typically supported sparse populations relative to the size of the 'territory'. The customary rights of tribal people over

livelihood resources and their territorial sovereignty (insofar as land was territory, not property) increasingly came in to conflict with the forces of 'modernisation', which was defined by the developmental state and by 'outsiders' (whom we may call the plains people). In this discourse, it was thought that tribal people's traditional livelihood system was characterised by underutilised, wasteful and 'inefficient' use of productive resources. Thus, the developmental state, mainly using the logic of the market, created a policy and legal framework for gaining control over resources from the 'tribal territory'. The territories of tribal people were thus broken open. There was widespread resentment and organised protests by tribal communities when this process of territorial intrusion was initiated by the colonial state through its land tenure policies in the uplands of Orissa in the mid-19th century and through forest conservation policies introduced at the end of that century. This indirectly facilitated the entry of caste Hindus into tribal territory for the commercial exploitation of productive resources. Thus, the space for the penetration of varied forms of commercial capital into the tribal hinterland was created. All this threatened to undermine the viability and sustainability of tribal people's livelihood base as their access to productive resources started to narrow. It is against the above background that we can understand the role and effectiveness of developmental interventions by the Indian nation-state and international development agencies for the protection and promotion of tribal livelihoods, and how tribal people have played a role in this.

Under these circumstances the initiative to build the house for the tribal community throughout the country became a need of the hour. India's success story is incomplete without the success of the tribes, living in the forest area or in the interior area of the district. Therefore the project **APNA GHAR** is planned.

The details plan of one unit has been enclosed here:-

Rate Analysis of Plaster (to wall, floor, ceiling etc.) with sand and cement mortar (20 mm. Thick 1:6) as per Annexure- I/ Format- A Cement Supplied by the Contractor				
		Cement Quantity	Rate	Final Rate
Step: 1	Rate of Item as per Relevant Section of this Schedule (3rd Corrig./P- 50/I- 1) =			166.00
Step: 2	Deduct Cost of Cement = (Quantity of Cement x Issue Rate of Cement) (Page- B- 48/Item- 9) =	0.0086	6289.00	54.34
Step: 3	Add Cost of Cement Supplied by the Contractor = (Quantity of Cement x Basic Price of Cement) =	0.0086	5717.00	49.39
<b>Final Rate of Item -</b>				<b>161.06</b>

Rate Analysis of Plaster (to wall, floor, ceiling etc.) with sand and cement mortar (10 mm. Thick 1:4) as per Annexure- I/ Format- A Cement Supplied by the Contractor				
		Cement Quantity	Rate	Final Rate
Step: 1	Rate of Item as per Relevant Section of this Schedule (3rd Corrig./P- 49/I- 1) =			129.00
Step: 2	Deduct Cost of Cement = (Quantity of Cement x Issue Rate of Cement) (Page- B- 48/Item- 8) =	0.0043	6289.00	27.17
Step: 3	Add Cost of Cement Supplied by the Contractor = (Quantity of Cement x Basic Price of Cement) =	0.0043	5717.00	24.70
<b>Final Rate of Item -</b>				<b>126.53</b>

Rate Analysis of 25mm thick Artificial stone in floor, Dado, Staircase etc. with cement concrete (4:2:1) as per Annexure- I/ Format- A Cement Supplied by the Contractor				
		Cement Quantity	Rate	Final Rate
Step: 1	Rate of Item as per Relevant Section of this Schedule (3rd Corrig./P- 22/I- 4) =			264.00
Step: 2	Deduct Cost of Cement = (Quantity of Cement x Issue Rate of Cement) (Page- B- 52/Item- 41) =	0.0126	6289.00	78.97
Step: 3	Add Cost of Cement Supplied by the Contractor = (Quantity of Cement x Basic Price of Cement) =	0.0126	5717.00	71.79
<b>Final Rate of Item -</b>				<b>256.82</b>

Rate Analysis of Neat Cement Punning as per Annexure- I/ Format- A Cement Supplied by the Contractor				
		Cement Quantity	Rate	Final Rate
Step: 1	Rate of Item as per Relevant Section of this Schedule (P- 192/I- 15) =			34.00
Step: 2	Deduct Cost of Cement = (Quantity of Cement x Issue Rate of Cement) (Page- B- 52/Item- 41) =	0.0022	6289.00	13.77
Step: 3	Add Cost of Cement Supplied by the Contractor = (Quantity of Cement x Basic Price of Cement) =	0.0022	5717.00	12.51
<b>Final Rate of Item -</b>				<b>32.75</b>

Format for Analysis of Rate of Reinforcing Steel Supplied by The Contractor (Annexur- I/ Format- B/ As Per 6th Corrigenda w.e.f. 29.07.2019)			
Step-1	Rate of Item as per Relevant Section of this Schedule (10th Corrig./P- 1) JSW/JSPL/SHYAM (Tor Steel/ HYSD)	Rs. A	64243.00
Step-2	Deduct Issue Rate (per MT) of Respective Quality Steel Including 10% Contractors Profit, 2% Sundries, Water Charge & 5% Wastage X 1.17 (10th Corrig./P- 4/ Annex. I)	Rs. B	54077.40
Step-3	Add Basic Price Rate (per MT) at Outlet of Steel of Respective Quality Steel Including 10% Contractors Profit, 2% Sundries, Water Charge & 5% Wastage X 1.17 (10th Corrig./P- 4/ Annex. I)	Rs. C	47923.20
Step-4	Add Cost of Carriage From Outlet to Site With Necessary Loading, Unloading & Stacking Charges for 1.05 MT Steel (PWD R&B/ T-1/ P- 230/ I- 1.03/ P- 227)	Rs. D	361.73
Final Rate of Item: (Rs A- Rs B + Rs C + Rs D) =			58450.53

Analysis of Rate of Ordinary Cement Concrete (Mix. 1:1.5:3 ) FORMAT - A				ANNEXURE - II	
Description of Item		Size	Qty	Unit	Rate
step-1	Rate of item as per relevant section of PWD Bldg. Schedule (3rd Corrig./ P- 12/ I- 33)				Rs. 4,568.00
step-2	Cost of Stone aggregate of diff. grading at Dalkhola rail yard (Table - T1 , P- 308) [ Consumption required for one cum of Concrete (vide P-B 60, It.no-3)	20 mm	0.573	Rs 1,212.00	Rs. 694.48
		10mm	0.287	Rs 1,081.00	Rs. 310.25
step-3	Cost of Carriage of Stone aggregate as per consumption required for one cum concrete as per (Table- T2/ P- 310)	20 mm	0.573	Rs 648.50	Rs. 371.59
		10mm	0.287	Rs 648.50	Rs. 186.12
step-4	Cost of Loading & unloading of stone aggregate bellow 40 mm nominal size. (Table- T3/ P- 311)		0.86	Rs 58.00	Rs. 49.88
Rate of 1:1.5:3 Concrete per CUM					Rs. 6,180.31

Road Transportation & Carriage Works (P- 310) ( Table : T-2)	
Dalkhola rail yard to	Work Site distance- 60 Km
	Upto 5 Km = Rs 124.00
	From 5 Km. to 10 Km. @ 10.90/- = Rs 54.50
	From 10 Km. to 20 Km. @ 10.10/- = Rs 101.00
	From 20 Km. to 50 Km. @ 9.50/- = Rs 285.00

# DIYA SOCIAL FOUNDATION

From 50 Km. to 60 Km. @ 8.40/- =	Rs	84.00
Total For 60 Km distance Per CUM =	Rs	648.50

		Cement Quantity	Rate	Final Rate
Step: 1	Rate of Item as per Relevant Section of this Schedule =			6180.31
Step: 2	Deduct Cost of Cement = (Quantity of Cement x Issue Rate of Cement) (Page- B- 51/Item- 36) =	0.412	6289.00	2591.07
Step: 3	Add Cost of Cement Supplied by the Contractor = (Quantity of Cement x Basic Price of Cement) =	0.412	5717.00	2355.40
	<b>Final Rate of Item =</b>		<b>5944.65</b>

**Conclusion:-** The APNA GHAR project by Diya Social Foundation represents a significant step towards enhancing the living conditions of tribal populations in India. With an initial investment of ₹85,64,95,000, we aim to construct 1,000 sustainable and environmentally compatible houses that will not only provide safe shelter but also empower these communities to thrive. By integrating tribal groups into the broader societal framework, this initiative will foster development, dignity, and a better quality of life for countless individuals. Together, we can create a lasting impact, transforming not just homes, but futures for the tribes of India.
